

Service Schedule - NodeLine

Use of NodeLine

Use of the Internode NodeLine service (“NodeLine”) is subject to Internode’s Standard Form of Agreement (“SFOA”) (which includes the Internode Privacy Policy and Acceptable Use Policy), and this Service Schedule. The terms and conditions in this Service Schedule are additional to Internode’s SFOA. This Service Schedule takes precedence over the SFOA to the extent of any inconsistency between the two documents.

Definitions

“Charges” means the setup, call, or VAS charges for NodeLine as listed either in this Schedule, the SFOA, or on-line from time to time (charges listed on the Website will apply in the event of inconsistency).

“Churn” means the transfer from a Telstra fixed line telephone service (for example Telstra HomeLine) to Internode’s NodeLine service.

“Network Boundary” is typically either the ‘first socket’ (in a free standing premises such as a house) or a Main Distribution Frame (in a multiple dwelling unit such as an apartment). If your Network Boundary point is a Main Distribution Frame, the cabling to your phone socket is usually provided by the building owner and remains a building asset. If sufficient suitable cabling is available between the Main Distribution Frame and the point where you have requested that we supply the NodeLine Service, completion of this work is included in the setup charge.

“Port” means a change to telephone service delivery infrastructure in accordance with clause 1.1.2 from another carrier to Telstra infrastructure.

“Premises” means the location where you intend to use the service. We will deliver your service to the Network Boundary point of that Premises.

“VAS” means the optional extra services for fees (eg. voicemail, or silent directory listing) or otherwise which can be provided with NodeLine at your request (including those listed in this schedule or on-line from time to time on the Web Site).

“Web Site” means Internode’s NodeLine web page: <http://www.internode.on.net/nodeline>

“We”, “Our”, “Us” or “Internode” means Internode Pty Ltd ABN 82 052 008 581 trading as Internode of 150 Grenfell Street, Adelaide, South Australia 5000.

1. The NodeLine Service

NodeLine provides a traditional analog telephony service for residential customers.

NodeLine will allow you to access standard telephony services including untimed local calls, calls to mobiles, domestic long-distance calls (to anywhere in Australia outside your local call charging zone), International calls, 000 Emergency services, plus a range of other number pre-fixes (including 1800, 13 and 1300 services) as listed on the NodeLine charges page on our website, and any VAS you choose.

NodeLine does not provide access to certain services - specifically including 190 numbers.

NodeLine is offered as described on our Web Site, and you acknowledge that the VAS available with NodeLine may not be the same as the VAS offered by your current provider. You may lose access to some VAS services offered by your current provider when your NodeLine service is connected.

You accept that the performance of the NodeLine service depends on factors that we cannot always control, and the quality of the service can be affected accordingly. Such matters include, but are not limited to:

- The quality of the equipment being used to make and receive calls.
- The correct operation of the equipment being used to make and receive calls.
- Calls being carried on networks not controlled by our provider.
- The location of your NodeLine service.
- Inclement weather.

Service Schedule - NodeLine

You agree that you are not a business customer, and that Internode may refuse or cease to provide NodeLine if it is determined that you are a business customer.

Internode may also refuse to supply a NodeLine service at its absolute discretion. Matters affecting the exercise of such a discretion may include (but are not limited to) that you are not eligible for the service, or you have requested the service be provided to an unusual or unsafe location.

1.1. Setup Options

There are three methods available for setting up a NodeLine service. Your current service will remain the same until we complete the churn/port or establish the new service connection. You remain responsible for all charges incurred on your current service up until the time at which Internode has provisioned your new NodeLine service.

You are responsible for any early termination or other charges imposed by your existing telephone and/or ADSL service provider.

If you place an order for an existing telephone service to be transferred to NodeLine, it is a requirement that you are the account holder of that existing telephone service. By submitting your order you warrant to us that this requirement has been met.

1.1.1. Setting Up via Churn of an Existing Telephone Service Provided by Telstra or a Telstra Reseller

A NodeLine service can be set up via a 'churn' process. This is only available if you currently have a fixed line service provided by Telstra or a Telstra reseller. The telephone service must be **active** (able to make and receive ordinary telephone calls), and connected to the Telstra voice network (either via Telstra or a Telstra reseller) via a copper pair.

Your current telephone number is retained during this process.

This process does not involve a change to your physical infrastructure - no site visit is required - your telephone connection is simply moved from your current provider to Internode.

If you are presently renting a telephone handset with your current telephone service, this must be returned to your current provider or additional charges may apply.

Please check carefully with your current provider regarding your contractual commitments and break / disconnection fees. Internode is not responsible for these charges.

1.1.2. Setting Up via Port of an Existing Telephone Service (other than a service provided by the Telstra fixed line network)

A **Port** order will convert an existing telephone service (other than a telephone service provided by the Telstra fixed line network) into a NodeLine service. This order type may require a site visit.

If you elect to have an existing telephone service converted to NodeLine service, then:

- We will endeavour to 'port' your existing telephone number to the NodeLine service, if that is what you have requested during the signup to NodeLine. Most telephone numbers can be successfully ported however there are some exceptions. If we find that your existing telephone number cannot be ported to NodeLine, then your order will be suspended, and we will contact you for advice on whether to proceed with a new telephone number.
- **Porting a number to a NodeLine Service from a provider other than Telstra will incur a \$250 early cancellation charge, if the NodeLine service is cancelled within the first 12 months.**
- Any ADSL service on the existing telephone service may be cancelled as part of the porting process. Please check carefully with your current service provider regarding contractual commitments and break / disconnection fees associated with the telephone service, and any additional services (such as ADSL) associated with the telephone service. Internode is not responsible for these charges.

Service Schedule - NodeLine

- If you are presently renting a telephone handset with your current provider, this must be returned to that provider prior or else additional charges may apply.
- A service outage will occur when your line is physically relocated at the local telephone exchange.

1.1.3. Setting up NodeLine via New Service Connections on Vacant Copper

In order to complete a 'New Service' connection for NodeLine, you must have a spare ('vacant') copper pair into the Premises. If you are unsure, you can order a service and we perform the detailed service qualification as part of the provisioning process.

A new telephone number will be allocated to you as part of this process.

You will be required to provide technicians with access to the Premises, for the purposes of installing a new NodeLine service.

The NodeLine service will be installed on to a new, upgraded or spare phone socket in your premises. This 'first socket' may be your existing phone socket upgraded from a single point to a double point; or it may be an existing phone socket that is not currently being used; or it may be an entirely new socket. It will depend on what is available at the specific Premises, and the type and location of the socket is entirely at the discretion of the installation technician. The setup cost for a new service connection will be:

- \$59, if a working telephone socket exists from a previous connection, and a technician is not required to visit your premises; or
- \$125, if a previous telephone service existed at your premises and a technician is required to visit in order to reconnect existing suitable cabling; or
- \$299 if you are in new premises or cabling work is required. This applies when a telephone service has not previously been connected at your premises (even if cabling exists). It also applies if a previous telephone service existed at your premises and a technician is required to visit in order to install and / or work on the cabling up to the first socket in the premises:

In certain circumstances an additional fee for service may be required - for example if a network extension is required to connect the service; a cabling extension is required to connect your premises; or additional cabling works within your premises are requested. You will be advised before commencement of these activities, and you are fully responsible for charges that are incurred if you agree to proceed. Groundworks such as trenching and re-instatement for underground lead-in cables are not available.

If your Network Boundary point is a Main Distribution Frame, the cabling to your phone socket is usually provided by the building owner and remains a building asset. If sufficient suitable cabling is available between the Main Distribution Frame and the point where you have requested that we supply the NodeLine Service, completion of this work is included in the setup charge.

Cabling from the Network Boundary point to any other location is your responsibility and you may incur charges for any installation, repair or any other work required in relation to any such cabling.

2. Customer Authorisations ("CAs")

When you transfer an existing telephone service to NodeLine, you are providing us with specific CAs by which you agree that you understand certain matters will result from the NodeLine sign up process that may affect your contractual rights with your current provider. In all cases you acknowledge that you or your authorised representative is authorised to request the changes in respect of the service numbers to which the following CAs relate:

Service Schedule - NodeLine

2.1. Local Number Portability CA

The Local Number Portability CA applies to Ports of Active Telephone Services that are not currently provided by the Telstra fixed line telephone network. You understand and agree that:

- by porting the service number, the service associated with that service number is disconnected from the current provider's network and may result in finalisation of your account for that service;
- by porting the service number, any ADSL service associated with that service number is disconnected and may result in finalisation of your ADSL account for that service; and
- although you have the right to port your service number, there may be costs and obligations associated with the port from your current provider, which may include early termination and porting fees.

2.2. Long-Distance Call Provider Pre-selection CA

You understand and agree that you may have an agreement with your current provider, and there may be consequences under your existing agreement if you change your pre-selection choice.

Pre-selection to an alternative long distance provider will result in an extra monthly charge on your NodeLine service.

2.3. Local Call Churn CA

You understand and agree that your existing local service will be replaced with a NodeLine service. Termination fees or other contractual obligations with your current provider may apply.

3. Cancelling NodeLine orders

You can cancel an order for a NodeLine service up to a week before the scheduled cutover date, and a \$50 cancellation charge will apply.

After this point we incur considerable third party costs and commitments, and these are passed on to you. Specifically, if you cancel your order for NodeLine service within five working days of the scheduled cutover date, then the setup charge, plus one month's rental as per the specific NodeLine plan, plus an early cancellation charge of \$250 may apply.

4. Incorrect NodeLine Information

Please ensure the accuracy of the information that you provide us for your NodeLine order. We will install the service exactly according to the instructions that you have given us.

If you provide incorrect information on your order - such as the wrong address for installation of the NodeLine service or the wrong phone number to be converted to NodeLine, then your service will be installed at the wrong location or on the wrong copper pair.

Because of costs that we incur in all completed installations and conversions, you will be charged in addition for corrections to the NodeLine service that you have incorrectly specified. This will consist of the relocation charge, plus one month's rental as per the specific NodeLine plan.

5. Relocating NodeLine Services

NodeLine services may be relocated if the service is available at the new Premises. Your telephone number can only be retained if the new Premises is served by the same local exchange as the existing Premises. A temporary phone number may be provided at the new Premises prior to the scheduled relocation cutover date.

Any applicable early cancellation charge for the existing NodeLine service (for example, if it has been ported in) will be applied if you do not obtain a NodeLine service at your new Premises.

Service Schedule - NodeLine

The relocation charge will be equal to the equivalent setup charge that would apply to the new premises (see clause 1.1).

6. NodeLine - Telephony Service

Several important specific conditions apply to the telephony component of the NodeLine service:

- 'Priority Assist' is not available. Priority Assist is for people who may be reliant on a telephone service because of a serious medical condition. We recommend that you consider medical advice, and consider your access to other telephony services such as an alternative mobile phone, before purchasing NodeLine in these circumstances.
- Calls to 190 numbers are not available.
- If you request that charges from third parties are applied to your telephone account - including, but not limited to, reverse charge calls, carrier over-ride calls, and enhanced telephone directory listings - then Internode reserve the right to charge an additional \$5 service fee per transaction.
- Long Distance Pre-selection to another carrier may not be available (where available, a \$5 per month charge will apply to cover administration costs), however our voice-over-IP service NodePhone is an alternative product you can use over your internet connection.

7. Caller ID

NodeLine numbers are compatible with Caller ID. Please be aware that:

- Unless you have selected a silent number or used the 1831 code, the receiving party will know your telephone number (Caller ID outbound).
- You can use the 1831 code (dial these numbers immediately before you dial the number your are calling) to block Caller ID outbound a per call basis.
- You can change your default Caller ID settings at any time using the instructions available on our Web Site.
- Regardless of your Caller ID status, Emergency Services will always see your telephone number.
- If you wish to have calling numbers displayed on your telephone handset (Caller ID inbound) you will need to select this VAS when you sign up for the service (monthly charges apply). You will need to have a Caller ID compatible handset.

8. Directory Listings

Your NodeLine telephone number can be either 'listed' - meaning it will be listed in printed and online public telephone directories without charge - or 'unlisted' - ie a silent number which will incur a fee. The allowable formats of your listing is described on our website, and in essence will consist of a valid combination of your first name or initials and surname. Business name listings are not permitted and listings may be refused at Internode's sole discretion.

No enhanced or business directory listings are available via NodeLine, although you may arrange enhanced directory listings (non-business only) with the telephone directory provider. If you incur additional charges from the directory provider and request to them that this is charged to your telephone account, a \$5 additional charge per transaction may be applied by Internode.

9. Fault Reporting

You agree to report faults to Internode as soon as possible. To allow Internode to be sure of the location of a fault with your NodeLine service, Internode may before acceptance of a report of any fault with your NodeLine service require you to undertake some basic preliminary testing of your NodeLine service as determined and directed by Internode. We may treat your fault report as a preliminary enquiry until you have undertaken such testing as directed by us. If a fault that you report turns out not to be the responsibility of our supplier (for example if it is on your side of the Network Boundary), a \$50 charge may be applied.

Service Schedule - NodeLine

10. Charges

You are responsible for the payment of all Charges including setup charges, monthly rental, call charge and any VAS charges. You acknowledge that Internode re-bills the NodeLine service from its wholesale supplier, and that some call types and VAS services may not be listed from time to time on our website. You agree that Internode may charge you for the provision of these call types or VAS services at the standard Telstra Retail rate that would apply if the charges were incurred on a HomeLine service.

In general monthly recurring charges (such as rental) are billed in advance, and usage charges (such as calls) are billed in arrears. However Internode reserves the right to bill in arrears in respect of items that have not been billed in advanced (including for VAS services).

11. Variations

Internode reserves the right to change the Charges without notice to the extent required to cover any changes in the amounts charged by wholesale supplier used by Internode to provide the NodeLine service. For up to date Charges see the Website.

Internode may cease providing the service in the event that its wholesale supplier ceases wholesale supply of the services.

12. Telephones

Internode is not responsible for the provision of telephone handsets or other equipment to use with your NodeLine service. If you are renting any telephone equipment from your existing telephone service provider at the time of signing up the NodeLine Service, you are required to immediately return such equipment. Charges may be imposed if you fail to do this.

13. Other Services

From time to time you may request that we provide you with other services which are not provided as standard with your NodeLine services, such as relocating cabling or sockets. You should contact Internode on 13 6633 to discuss whether Internode is able to undertake such works, and obtain a quote from Internode to provide these services.

14. Early Cancellation Charge

An early cancellation charge applies only in the event that your NodeLine service has been established via a port, ie it has been transferred to NodeLine from a network other than the Telstra fixed line network. In this case an early cancellation charge of \$250 is applicable if the service is cancelled within the first 12 months.

You should seek the advice of Internode before changing telephone service provider to determine if this charge applies and whether you wish to proceed.

15. Security

You are responsible for securing access to your NodeLine service. You acknowledge that you will be liable for all Charges resulting from the use of your NodeLine service, whether authorised by you or not.
