Disaster Recovery in the cloud

The cost and hassle of building and managing a backup and disaster recovery system is often too high for small and medium businesses. You can have cost effective disaster recovery as part of your business continuity plan in case disaster does strike. With the cloud you can restore IT and business systems as well as get your business operational with minimum disruption to you and your customers.

Features:

- Data stored offsite
- Disaster downtime reduced, minimising cost implications
- Cost effective

Benefits:

- Reduce the risk of loss of credibility and goodwill and customers
- Ensure services, production and sales can continue
- Prevent the loss of operational information
- Ensure capability to maintain staff payments
- Prevent financial loss
- No large upfront capital cost
- No need to duplicate current hardware and software investment

Business advantages of hosted disaster recovery:

Separate from your environment

Ensure that you have managed copies of your data information outside of your standard business environment. Secured and controlled access to your information.

Manageability

Automate and eliminate manual tasks to enable you to focus your core business needs. Knowledge you have a crisis management to provide IT coverage sufficient to keep the business functionally effectively

Availability

Create a robust, highly available and low-cost infrastructure that simplifies your data backup and recovery.

Stress-free Internet.

Across Australia our corporate, business and residential customers enjoy the ultimate state of online contentment – stress-free Internet. We're able to offer this bliss because we have our own high performance network dedicated solely to Internode customers.
